Forgot Password

A user can click on the *Forgot Password* link to reset a forgotten password. The user is then prompted to enter his/her User ID and the registered Email Address Upon verification of the same, the user will receive an email with a new password which canbe changed after signing in.

Doctor Profile has 2 tabs:

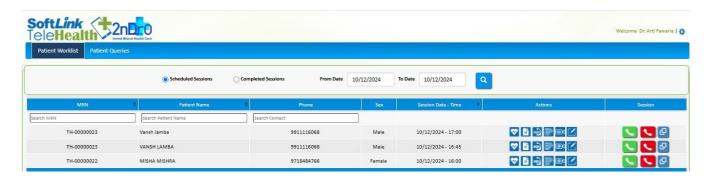

- 1. Patient Worklist
- 2. Patient Queries

1.Patient Worklist

1.1 Schedule Sessions

The appointments will appear on the Scheduled sessions page of the Patient worklist tab once the patient confirms the appointment by paying the doctor's consultation fees. Only the admin and doctor profiles will have access to this page. The admin can view the scheduled sessions of each doctor, as well as clinical information, reports, DICOM studies, and patient details. But the doctor is the only one who can examine his scheduled appointments. Other features include the ability to start, stop, and copy sessions, which allows the doctor to send a link to another doctor or patient's relative so they can join as guests.

- : Doctor can view Clinical Information of a patient.
- : Doctor can view Reports of a patient.
- : Doctor can view the DICOM study. Ex: CT, MRI, XA, US, etc.
- : Doctor can write Advisory Report from here.
- : Doctor can view the Audio Video Recording from here.
- : Doctor can view short summary written by an internal doctor from here.

For Doctor Profile:

: Doctor can start video call session using this start button.

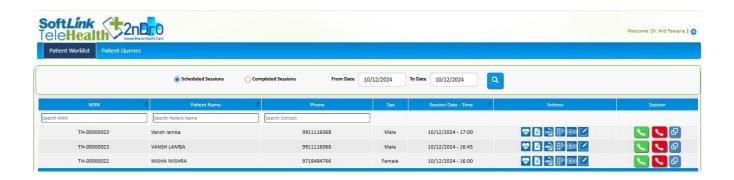

: Doctor can end the session using this button.

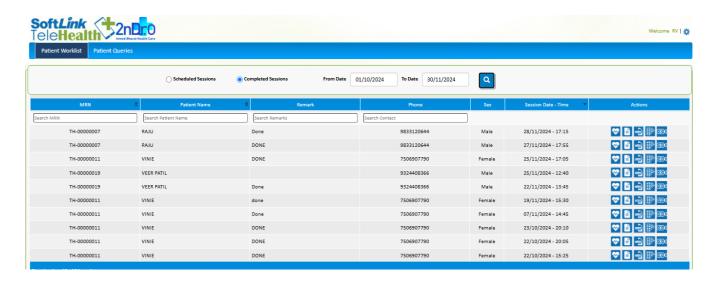

: Doctor can send a link to another doctor or patient's relative so they can join as guests.

The doctor can view the scheduled session for the particular period by using the date filter. The doctor can only begin a session whose session date is present date; sessions that are scheduled for the future or the past that have not yet started or will not start will not be able to start, and the start, end, and copy link buttons will not work for those sessions.

1.2 Completed Sessions

The appointments will appear on the Completed sessions page after the doctor clicks on end button after video call end. Admin/Doctor can see doctors remark on this page.

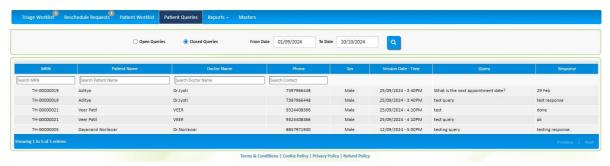

2. Patient Queries

2.1 Open Queries

The patient may raise queries regarding his completed appointments or sessions, and those queries will show up on the Patient Queries tab's Open Queries page. The completed appointments must havebeen made within the last week; if the sessions were completed more than a week ago, the patient willnot be able to raise or ask queries about those appointments. Only the admin and doctor profiles will have access to this page. Doctor gives response to the respective query of that appointment and that response sends to the patient via SMS.

2.2 Closed Queries

The doctor responded message will appear in response column and that message will be sent to therespective patient via SMS and the query goes in closed queries page.
